# Model 515

# **Application GC06**

General Gas Flow Computer

for Stacked DP Volumetric Flowmeters

### Features

- Tailored for differential pressure volumetric meters with single or stacked transmitters
- Generic differential pressure flow calculations
- Calculations based on a variety of General Gas equations
- Selection of second language and user tags
- RTC logging with over 1000
  entries
- Programmable pulse width and scaling of pulse output
- 4-20mA retransmission
- RS-232 and RS-485 (optional) serial ports
- Modbus RTU, Printer and other serial port protocols

 $(\epsilon)$ 

- Front panel adjustment of 8-24V DC output voltage
- Backlit display

# **Overview**

The 515 GC06 application measures the volume, corrected volume and mass of a general gas. The instrument uses single or stacked differential pressure volumetric flow inputs and analog temperature and pressure sensor inputs.

The instrument calculates the flow according to generic differential pressure equations and incorporates the conditions at which the flowmeter was calibrated.

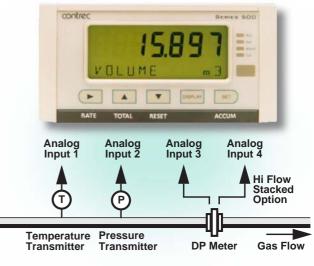

The properties of a gas are calculated using common industry standard equations of state. These equations use a simplified set of parameters to quickly and accurately determine the value of compressibility and actual quantity of gas.

## Calculations

A variety of calculations are available to suit the nature of the gas and the measurement conditions. The calculations are valid for the vapour phase of a gas.

Equations Of State:

- Ideal Gas
- Redlich-Kwong
- Soave-Redlich-Kwong
- Peng-Robinson

Accuracy • Quality • Performance

# **Displayed Information**

The front panel display shows the current values of the input variables and the results of the calculations. A list of the variables for this application and their type (total or rate) is shown at the end of this document.

The instrument can be supplied with a real-time clock for data logging of over 1000 entries of the variables as displayed on the main menu.

# Communications

There are two communication ports available as follows:

- RS-232 port
- RS-485 port (optional)

The ports can be used for remote data reading, printouts and for initial application loading of the instrument.

# **Isolated Outputs**

The opto-isolated outputs can re-transmit any main menu variable. The type of output is determined by the nature of the assigned variable. Totals are output as pulses and rates are output as 4-20mA signals. One output is standard, a second output is available as an option.

## **Relay Outputs**

The relay alarms can be assigned to any of the main menu variables of a rate type. The alarms can be fully configured including hysteresis. Two relays are standard with additional two relays available as an option.

# **Software Configuration**

The instrument can be further tailored to suit specific application needs including units of measurement, custom tags, second language or access levels. A distributor can configure these requirements before delivery.

Instrument parameters including units of measurement can be programmed in the field, according to the user access levels assigned to parameters by the distributor. All set-up parameters, totals and logged data are stored in non-volatile memory with at least 30 years retention.

# Temperature and Pressure Input Types

Temperature sensor input(s) can be either PT100, PT500, 4-20mA, 0-5V or 1-5V signals. Pressure sensor input(s) can be either 4-20mA, 0-5V or 1-5V signals.

# **Terminal Designations**

|     | Termina<br>Label |    | Designation           | Comment                    |
