

DESCRIPTION

The MS3702B is a slim, plug-in RTD temperature transmitter that converts input signals from an RTD into commonly used DC signals and provides isolated single or dual output. This model is intended for measurement of narrow temperature spans, e.g. 30 to 50°C (Pt 100Ω input). It is therefore recommended to choose this for applications where a measuring temperature span is small.

ORDERING INFORMATION

To place an order, please use the ordering code format as shown on the left. Also specify a measuring temperature range.

(e.g.) MS3702B-A-P1A6 (0 to 30°C)

* Note that the temperature range should be specified in steps of at least 10 degrees Celsius.

Another Ordering Example:
For an output code of "0": MS3702B-A-P106 (0 to 30°C / Output: 2 to 5V)
Note: If you wish to include multiple options in your order, specify the option codes in series (e.g. /LX).
